

Is this how your engineer friend feels when designing water heating systems?

We can help!

Learn how to “Tankless” in Hotels, large or small

August 30, 2016, 2 PM EST

Typical water heaters today are about the same as they were 75 years ago. They use either tank type or boilers with storage tanks, with multiples installed for reliability. Fundamentally, this equipment doesn't match the load 23 out of 24 hours a day. This webinar will empower you with critical analysis and draw profiles from the hospitality industry. Learn how modular tankless systems can be effectively applied to cut your capital cost by 50%, operation costs by 40%, and space needs by 80% while simultaneously quadrupling reliability.
